

A health center need a Database with the case history of all its patients. The health center is divided into several **units**, each one having an *identifier*, a *name* and the *floor* on which it is located.

The unit has a **doctor** in charge, characterized by his/her *name*, *code* and *speciality*. When **patients** arrive, they are admitted in a unit and are registered with their *Social Security number*, *age* and *date of admission*. While they are still in hospital, all **interventions** realised by doctors are written down, *setting the date*, the *observed symptom* and the *prescribed treatment*.
